

Training Opportunity for NEW Custom Applicators

Maximize Equipment Investments by Properly Training Applicators

Today's highly sophisticated sprayers are critical investments for your business. Customers depend on your ability to save them time, work and money through precise pesticide applications. Your rig needs to be ready to roll on a moment's notice and you cannot afford errors. Is your new employee prepared to jump behind the wheel of that expensive new rig? This course will cover the important classroom topics and will provide eight hours of behind-the-wheel training for each student. Investing in a few days of training for your applicators could make all the difference down the road.

Make Your Team Field Ready

We will have Case IH, AGCO, Miller and John Deere sprayers on site for use in behind-the-wheel training with Master Applicators making sure your employees get the time and attention they need. Our training format lets your people kick the tires (literally) and ensures time to ask questions and gain the skills and knowledge they need to perform and represent your business in the most positive light.

Who Should Attend the Training?

Candidates for this short course include new hires, relatively inexperienced custom applicators, or employees from other company divisions that fill in as temporary applicators during the busy spray season. Our training will help all participants improve their understanding of equipment and operations and provide hands-on experience.
